Occupational Therapy Assessment Report

Sensory-Motor, Fine & Gross Motor, and Functional Performance Evaluation

Confidentiality Statement: This report contains sensitive clinical information intended solely for the qualified professionals, caregivers, and educators directly involved in the child's care. Any disclosure, sharing, or duplication of this report requires prior written consent from the child's legal guardians.

CONTENTS

01	Reason for Referral	11	Balance & Postural Control
02	Assessment Methods	12	Upper Limb Function
03	Behavioural Observation	13	Attention & Participation
04	Interactive Skills	14	Clinical Impression
05	Relationship to Objects	15	Summary of Findings
06	Body Awareness	16	OT Goals
07	Sensory Processing	17	Therapy Recommendations
08	Muscle Strength & Tone	18	Home Program
09	Gross Motor Skills	19	Nursery / School Recommendations
10	Fine Motor Skills	20	Prognosis

Section 01

Reason for Referral

[Child's Full Name], a [age] [boy/girl], was referred for an Occupational Therapy assessment. [Summarise the caregiver's presenting concerns — e.g., sensory sensitivities, attention span, motor coordination, social communication.]

The assessment aims to:

- Look at the child's current sensory, fine motor, and gross motor skills.
- Identify what helps and what gets in the way of their play, self-care, and early learning.
- Understand how sensory processing affects their attention and regulation.
- Set clear, personalised therapy goals.
- Give caregivers, and nursery/school staff where relevant, practical guidance to support development at home and at school.

Section 02

Assessment Methods

These findings are based on clinical observation, informal assessment tools, and conversations with the child's caregivers across several sessions:

- Clinical observation of sensory and motor performance
- Structured play-based assessment
- Sensory processing observation (proprioceptive, vestibular, visual, tactile, and auditory)
- Fine and gross motor skills observation
- Muscle tone and strength assessment
- Balance and postural control assessment
- Activities of daily living (ADL) observation
- Caregiver interview and developmental history review

Section 03

Behavioural Observation

[Describe the child's general presentation and behaviour during the assessment sessions.]

- *[Observation on attention span during structured or non-preferred tasks.]*
- *[Observation on engagement and cooperation during preferred/motivating activities.]*
- *[Observation on redirection needed to stay on task.]*
- *[Observation on response to therapist interaction and guidance.]*

[Note any behavioural strengths observed, e.g., response to motivation or preferred activities.]

Section 04

Interactive Skills

[Summarise the child's social engagement and interactive skills during structured and unstructured play.]

- *[Observation on eye contact.]*
- *[Observation on engagement during preferred/sensory-based activities.]*
- *[Observation on joint attention and reciprocal interaction.]*
- *[Observation on response to name/verbal bids for attention.]*

[Note the expected direction of progress with structured practice.]

Section 05

Relationship to Objects

[Describe how the child explores and interacts with toys and familiar objects.]

- *[Observation on visual/tactile exploration style.]*
- *[Observation on purposeful manipulation during constructional/fine motor play.]*
- *[Observation on object/toy preferences.]*
- *[Factors influencing object use, e.g., strength or attention.]*

Section 06

Body Awareness

[Describe the child's body scheme and body awareness during movement-based tasks.]

- *[Observation on awareness of body position during transitions.]*
- *[Observation on imitation of body movements/postures.]*
- *[Observation on motor planning for novel movement sequences.]*
- *[Observation on reliance on visual/tactile feedback for body orientation.]*

Section 07

Sensory Processing

[Summarise the sensory processing domains affecting attention, regulation, and participation.]

Proprioceptive

[Observation on proprioceptive processing.]

Vestibular

[Observation on vestibular processing.]

Visual

[Observation on visual processing.]

Tactile

[Observation on tactile processing.]

Auditory

[Observation on auditory processing.]

Overall Impact

[Summarise the combined functional impact of the above.]

CLINICAL NOTE

[Note which sensory strategies the child responds well to, e.g., specific input types that support regulation.]

Section 08

Muscle Strength and Tone

[Summarise findings on muscle strength and tone.]

- *[Observation on upper limb strength during weight-bearing/resisted tasks.]*
- *[Observation on core/postural strength and endurance.]*
- *[Observation on grip strength.]*
- *[Observation on muscle tone and postural control during movement.]*

Section 09

Gross Motor Skills

[Summarise gross motor coordination relative to age expectations.]

- *[Observation on following gross motor instructions.]*
- *[Observation on running, jumping, and climbing.]*
- *[Observation on movement sequencing and bilateral coordination.]*
- *[Observation on endurance during physical activity.]*

[Note a strength to build on for further gross motor development.]

Section 10

Fine Motor Skills

[Summarise fine motor development relative to age expectations.]

- *[Observation on following fine motor instructions.]*
- *[Observation on grasp patterns during drawing/manipulation tasks.]*
- *[Observation on grip endurance during table-top tasks.]*
- *[Observation on bilateral hand use during constructional play.]*

Section 11

Balance and Postural Control

[Summarise balance and postural control findings, linking to sensory processing where relevant.]

- *[Observation on single-limb balance and dynamic movement.]*
- *[Observation on postural stability when reaching outside base of support.]*
- *[Observation on balance over uneven/unstable surfaces.]*
- *[Observation on compensatory strategies used, e.g., base of support.]*

Section 12

Upper Limb Function

[Summarise upper limb function during weight-bearing, reaching, and manipulative tasks.]

- *[Observation on strength during weight-bearing activities.]*
- *[Observation on fatigue during reaching/overhead activities.]*
- *[Observation on grip and carrying endurance.]*
- *[Observation on bilateral arm use during play.]*

Section 13

Attention and Participation

[Summarise overall attention span and how participation is influenced by motivation.]

- *[Observation on sustained attention during non-preferred/structured tasks.]*
- *[Observation on attention/participation during motivating or sensory-rich activities.]*
- *[Observation on following instructions across motor tasks.]*
- *[Strategies that help sustain engagement, e.g., short tasks, movement breaks, rewards.]*

OBSERVED STRENGTH

[Note how motivation influences the child's engagement, cooperation, and instruction-following.]

Section 14

Clinical Impression

[Summarise the child's overall developmental profile based on the findings above.]

[Describe how these difficulties affect engagement, motor skills, and social behaviours, and note key strengths to build on.]

[State the overall clinical outlook and the recommended therapeutic approach.]

Summary of Findings

In summary, this assessment identified the following:

- *[Key finding 1]*
- *[Key finding 2]*
- *[Key finding 3]*
- *[Key finding 4]*
- *[Key finding 5]*
- *[Key strength 1]*
- *[Key strength 2]*

[Closing summary statement on overall profile and outlook.]

Occupational Therapy Goals

SHORT-TERM GOALS (3–6 MONTHS)

DOMAIN	GOAL
Sensory Regulation	<i>Within [] months, [Child] will [tolerate/engage with] [], in [] out of [] sessions.</i>
Tactile Tolerance	<i>Within [] months, [Child] will [], in [] out of [] tries.</i>
Visual & Auditory Attention	<i>Within [] months, [Child] will [] for [] minutes with no more than [] reminder(s).</i>
Upper Limb Strength	<i>Within [] months, [Child] will [] for [] seconds with minimal support.</i>
Balance	<i>Within [] months, [Child] will [], in [] out of [] tries.</i>
Fine Motor	<i>Within [] months, [Child] will [], in [] out of [] tries.</i>
Instruction Following	<i>Within [] months, [Child] will follow []-step instructions with [], correctly []% of the time across [] sessions.</i>
Attention	<i>Within [] months, [Child] will stay focused on [] for [] minutes with no more than [] reminder(s).</i>

LONG-TERM GOALS (6–12 MONTHS)

DOMAIN	GOAL
Sensory Integration	<i>Within [] months, [Child] will manage sensory input well enough to [] with minimal adult support.</i>
Gross Motor & Balance	<i>Within [] months, [Child] will [] with only standby supervision.</i>
Upper Limb & Fine Motor	<i>Within [] months, [Child] will have enough strength and fine motor control for [], with minimal assistance.</i>
Attention & Participation	<i>Within [] months, [Child] will stay engaged in [] for [] minutes in structured settings.</i>
Interactive Skills	<i>Within [] months, [Child] will maintain eye contact and shared engagement during play for at least [] exchanges in a row.</i>

Section 17

Therapy Recommendations

We recommend Occupational Therapy _____ times a week, focusing on:

● [Recommendation 1]

● [Recommendation 2]

● [Recommendation 3]

● [Recommendation 4]

● [Recommendation 5]

● [Recommendation 6]

Section 18

Home Program Recommendations for Parents

● [Home recommendation 1]

● [Home recommendation 2]

● [Home recommendation 3]

● [Home recommendation 4]

● [Home recommendation 5]

● [Home recommendation 6]

● [Home recommendation 7]

● [Home recommendation 8]

Section 19

School / Nursery Recommendations (if applicable)

● [School/nursery recommendation 1]

● [School/nursery recommendation 2]

● [School/nursery recommendation 3]

● [School/nursery recommendation 4]

● [School/nursery recommendation 5]

● [School/nursery recommendation 6]

● [School/nursery recommendation 7]

Section 20

Prognosis

[State the expected outlook with consistent therapy, caregiver involvement, and regular reassessment.]
